

DNS Spoofing from 192.168.10.23

*Investigation `inv\_a7e70190d93e4d2aa9c2ee3683e94f44` · alert `alr\_22f6d3b1e0514a1cb41400c86374c0d3`
· generated 2026-10-07T02:39:32.357655+00:00*

Severity: LOW

- base severity for category Spoofing = medium
- mean model confidence 0.60 < 0.60 → -1

Alert summary

Analyst summary

1-stage DNS Spoofing from 192.168.10.23; severity low; 7 evidence items, 5/5 claims evidence-linked.

Attack chain

1. DNS Spoofing (Spoofing) — 1 flows, 2026-10-06T21:15:25.011000+00:00 → 2026-10-06T21:41:54.426000+00:00; sources 192.168.10.23; targets 192.168.10.56, 192.168.20.9, iot-lock-06, iot-nas-09; support: weak; evidence: evt_531ce0fc26554a79bb75d423b627827d, evt_614f60f174a24d97ba10be719453f0a2

Method: deterministic: Attack nodes PERFORMED by the alert source ordered by first_seen; other sources flooding the same target are listed as distributed_sources; other activity on the targets is context only

Other activity observed on the same targets (context only)

- Ping Sweep from 203.0.113.101 — 48 flows, 2026-10-06T21:22:03.297000+00:00 → 2026-10-06T21:23:01.343000+00:00
- ARP Spoofing from 203.0.113.101 — 15 flows, 2026-10-06T21:22:04.939000+00:00 → 2026-10-06T21:33:27.710000+00:00
- DDoS TCP Flood from 203.0.113.158 — 106 flows, 2026-10-06T22:58:51.938000+00:00 → 2026-10-06T23:00:30.580000+00:00
- DDoS TCP Flood from 198.51.100.43 — 98 flows, 2026-10-06T22:58:52.897000+00:00 → 2026-10-06T23:00:30.426000+00:00
- DDoS TCP Flood from 198.51.100.137 — 96 flows, 2026-10-06T22:58:53.014000+00:00 → 2026-10-06T23:00:30.427000+00:00

Evidence-backed claims

- ■ Alert alr_22f6d3b1e0514a1cb41400c86374c0d3: 1 flows from 192.168.10.23 predicted as DNS Spoofing (mean confidence 0.60) between 2026-10-06T21:15:25.011000+00:00 and 2026-10-06T21:15:25.011000+00:00.
evidence: evt_614f60f174a24d97ba10be719453f0a2

- ■ Stage 1: DNS Spoofing from 192.168.10.23 against 192.168.10.56, 192.168.20.9, iot-lock-06 (1 flows, 2026-10-06T21:15:25.011000+00:00 → 2026-10-06T21:41:54.426000+00:00).
evidence: evt_531ce0fc26554a79bb75d423b627827d, evt_614f60f174a24d97ba10be719453f0a2
- ■ search_alerts returned 1 records (predicted types: DNS Spoofing×1; 1 related alert(s): DNS Spoofing).
evidence: evd_7887c19439014d8ebc0c7d79c2f72bfd
- ■ search_security_events returned 12 records (predicted types: Benign×11, DNS Spoofing×1; 1 destination(s)).
evidence: evd_71fac526d1944177903c929186f5ed98
- ■ search_alerts returned 5 records (predicted types: Ping Sweep×1, ARP Spoofing×1, DDoS TCP Flood×1; 5 related alert(s): ARP Spoofing, DDoS TCP Flood, Ping Sweep).
evidence: evd_9b7d109db4e74759a6b428e47a67690f

AI attack narrative

Generated by: template (LLM unavailable or narrative failed grounding validation) · model: n/a · grounding validation: {"checked": false}

At 2026-10-06T21:15:25.011000+00:00, 1 network flows from 192.168.10.23 towards 192.168.20.9 were classified as DNS Spoofing (Spoofing) with mean model confidence 0.60. The flow-level features flow_duration, Header_Length, syn_count provide behavioral evidence associated with the labelled DNS Spoofing class [evt_614f60f174a24d97ba10be719453f0a2].

Adaptive evidence collection found no earlier or later stages attributable to the source within the retrieved windows; the incident is reported as a single-stage event. [evd_7887c19439014d8ebc0c7d79c2f72bfd]

search_alerts: predicted types: DNS Spoofing×1; 1 related alert(s): DNS Spoofing.
[evd_71fac526d1944177903c929186f5ed98] search_security_events: predicted types: Benign×11, DNS Spoofing×1; 1 destination(s). [evd_9b7d109db4e74759a6b428e47a67690f] search_alerts: predicted types: Ping Sweep×1, ARP Spoofing×1, DDoS TCP Flood×1; 5 related alert(s): ARP Spoofing, D.

Other activity on the same target(s) (context, not attributed to 192.168.10.23): Ping Sweep from 203.0.113.101 (48 flows); ARP Spoofing from 203.0.113.101 (15 flows); DDoS TCP Flood from 203.0.113.158 (106 flows); DDoS TCP Flood from 198.51.100.43 (98 flows).

Threat intelligence: Insufficient evidence — no external reputation data was obtained for the source indicator (provider not configured or unavailable).

What cannot be concluded: usernames, passwords, commands, payloads, files or process activity — Insufficient evidence from network-flow features alone.

Threat intelligence (actual API results)

Insufficient evidence — no external reputation data obtained.

MITRE ATT&CK mapping

Behavioral evidence

- flow_duration: z vs benign = -0.6975848818079365
- Header_Length: z vs benign = 0.38261389767812765
- syn_count: z vs benign = -1.0450275429186702
- rst_count: z vs benign = 0.4177111437697597
- Protocol Type: z vs benign = -0.6676020581447252

Recommended actions

- Enable dynamic ARP inspection / DHCP snooping on the affected segment and validate DNS resolver configuration of the devices.
- Check the devices for signs of traffic interception (not available from flow data).

Investigation limitations

- Entity and time context (IP addresses, devices, timestamps) is synthesized for CICIoT2023 flows; feature values and attack labels come from the data source recorded in each event.
- Flow features are behavioral evidence associated with the labelled class; usernames, commands, payloads, files and process activity are not available from the current evidence.
- No earlier or later stages were found in the retrieved evidence; the incident is reconstructed as a single-stage event (no kill chain is forced).
- 5 other attack-type cluster(s) from different sources were observed against the same target(s); they are reported as context, not attributed to 192.168.10.23.
- Low-support stage(s) 1 DNS Spoofing (1 flow): fewer than 3 flows were classified with this label; this may be a model misclassification and is reported with a weak-support flag rather than asserted as an attack step.
- No external threat-intelligence data was obtained (provider not configured, indicator private/documentation range, or unavailable).
